

McKenzie Watershed Cyanotoxin Results

Health advisory values are different for recreational water uses and drinking water.

The difference between the two reflects the amount of water children and adults incidentally ingest while swimming, water skiing, etc., and the amount of water ingested when drinking from the tap. Since much more water is ingested through drinking water, the health advisory values for drinking water are much lower than for recreational use advisories.

All values expressed in parts per billion (ppb or ug/L)

	Cylindrospermopsin	Microcystin	Anatoxin-a
--	--------------------	-------------	------------

Health Advisory Level for Treated Drinking Water

Adults	3	1.6	Not Regulated
Vulnerable Populations	0.7	0.3	Not Regulated

Health Advisory Levels for Recreational Water Activities
