

Our job is to help you

Are you interested in rebates, industrial efficiency, or building a new facility?

The Commercial and Industrial Energy Management team is ready to provide expert advice that helps you conserve energy at your business.

Check out all of our programs at www.eweb.org, or call Energy Management Services at (541) 685-7000.

We've assisted many businesses with expert advice for saving energy, and we can provide the same benefits to you.

“My client raves about the EWEB program and the cost savings, so I decided to give them a call. The EWEB folks were easy to work with, and we were able to select our own contractor. We just had a great experience.”

- Denis Hijmans, State Farm insurance agent

EWEB'S Energy Answers For Business

EUGENE WATER & ELECTRIC BOARD

Have energy questions?

We supply the answers.

EWEB staff can recommend steps to improve the efficiency, reliability, and performance of your existing equipment and facilities. We'll help to reduce energy waste and minimize operating costs, and that makes your business more profitable.

Energy Management staff can answer questions about a building's energy systems and lighting, and provide useful information about energy codes, lighting technologies, electrical systems and equipment, energy efficient products, energy budgeting, variable speed drives, and a wide array of other topics. If we don't have the answer, we'll help you find it.

Technical Services

EWEB can help you identify problems that you are experiencing with systems or equipment.

We offer these custom power services:

- Troubleshooting and problem solving
- Analysis of load shapes
- Quantifying electrical use
- Power factor analysis
- Infrared analysis

Power Quality

Whether the source of the problem is outside or inside your facility, we understand that you want electricity that gives you trouble-free service for your business. To make sure you're getting the best possible level of electrical service, EWEB has created a power quality team to address your needs.

We offer these services:

- Power quality troubleshooting, auditing, review, and analysis
- Outage mitigation recommendations
- Surge protection recommendations
- Custom power solutions
- Power quality education

Energy Tips

Want to save energy and money? Making some simple changes can produce significant savings at business facilities. Here are some easy energy-saving ideas to get you started.

Lighting

- If you are the last one out, turn out general area lights.
- If you walk by an empty room with the lights on, turn them off.
- If you get to work early or work after regular hours, only use the lights you need.

Heating and Cooling

- During occupied hours, set thermostats at 68-70°F for heating and 74-76° for cooling.
- For after hours, adjust your thermostat to 55-60°F for heating and 80° for cooling.
- Wear layers of clothing so you can adjust to stay comfortable.

Computers

- Turn off your computer monitor when you'll be away from your computer for more than 15 minutes.
- When you leave for the day, log out and turn off your computer at the power switch.
